PERSONALIZATION

Putting the power in your hands.

When >> Then is a personalization tool that gives you the ability to customize and fine-tune the automation in your smart home after the initial install without needing a dealer. Think of the **When** as a trigger (like a schedule, a touch of a button, or when an event occurs), and the **Then** as the action you desire. Add a new set of lights to a current scene, have the porch lights come on at dusk, or even receive a notification when the garage door is left open. There are thousands of possibilities to customize your smart home, your way.

Notifications to keep you in the know.

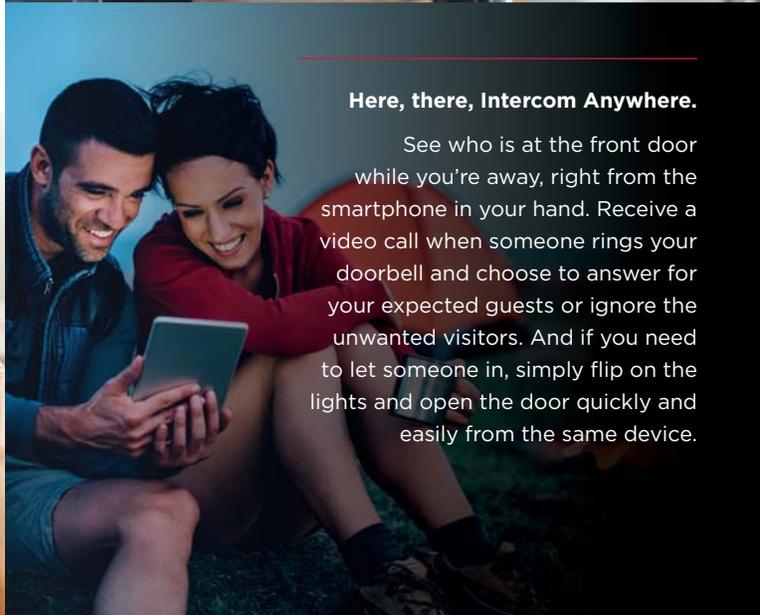

Personalized notifications can be sent directly to a mobile phone, tablet, or Apple Watch to alert you if something at home needs your attention. Be notified when family members come and go, a motion detector is triggered, the garage was left open, or there is a water leak in the basement.

REMOTE ACCESS

No matter where you are, you have peace of mind with you.

Enjoy complete control from inside and outside of your home. Quickly change the temperature, ensure the garage door is closed, or turn on the lights from nearly anywhere in the world with just a few taps on your handheld device.

Here, there, Intercom Anywhere.

See who is at the front door while you're away, right from the smartphone in your hand. Receive a video call when someone rings your doorbell and choose to answer for your expected guests or ignore the unwanted visitors. And if you need to let someone in, simply flip on the lights and open the door quickly and easily from the same device.

MORE CONTROL

You talk, your house listens.

With Control4 and Amazon Alexa, when you talk, the house listens. Simple voice commands can activate entire smart home scenes, control individual lights, and more. Ask Alexa to turn the thermostat down while you're cooking and your hands are full, or to turn on the lights and your favorite tunes while you walk into the house.

Control your home with a flick of the wrist.

Use the Control4 App on your Apple Watch to control lighting, thermostats, volume, and more. No need to find the remote or pull out your phone. You can even ramp or dim the lights or adjust the volume from the digital crown. It's home automation on hand—literally.

Experience the 4Sight advantage.

Get the most out of your smart home with voice control, Apple Watch support, automation personalization, alerts and notifications, and remote access while you're away to ensure that you are connected at all times. With an annual subscription fee of \$100 USD, you can reap these added benefits from your home automation system and take control like never before.
